AMENDED APPLICATION FOR PERMISSION TO CHANGE THE POINT OF DIVERSION AND PLACE OF USE OF A PORTION OF THE PUBLIC WATERS OF THE STATE OF NEVADA HERETOFORE APPROPRIATED BY WESTPAC UTILITIES, A DIVISION OF SIERRA PACIFIC POWER COMPANY ("Sierra Pacific")

ITEM NO. 15 - REMARKS:

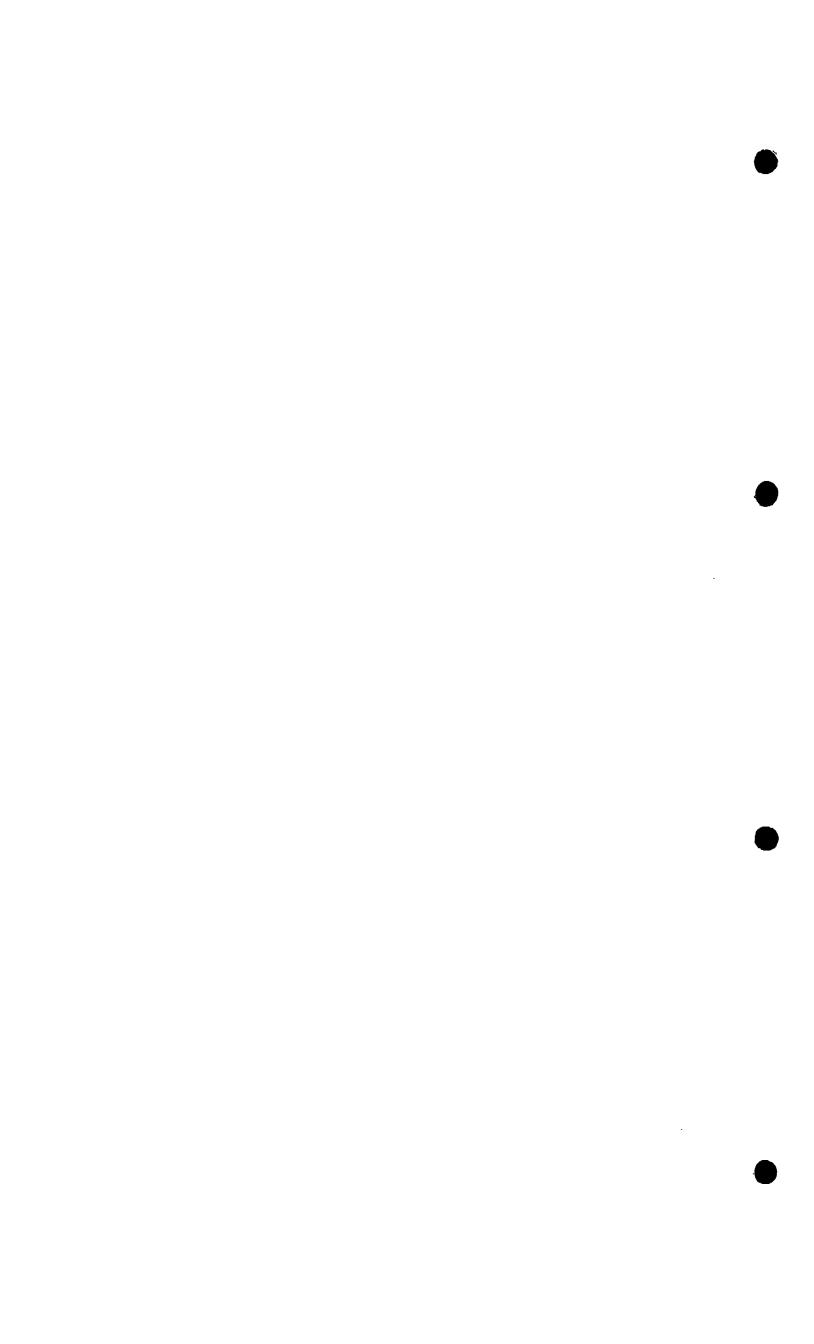

Sierra Pacific intends to develop municipal production wells within the areas defined by Applications to Change No.s $\underline{59421}$ through $\underline{59542}$. The water developed will be provided to existing and new customers within present and future service areas of Sierra Pacific. The proposed source of water is the fractured bedrock aquifers. The total combined duty of Applications to Change No.s 59421 through 59542 is 10,077 acre feet annually.

The proposed total combined duty of 10,077 acre feet, Applications to Change No.s $\underline{59421}$ through $\underline{59542}$, is intended to be in addition to Sierra Pacific's "Administrative Capped" groundwater rights and its acquired groundwater rights. Short term and long term limits to the Truckee Meadows groundwater rights currently subject to the State Engineer's "Administrative Cap" should not be impacted by these applications. By filing the above Applications to Change, Sierra Pacific proposes to divert groundwater from the fractured bedrock aquifers which are resources distinct from the aquifers which are subject to present and future administrative "caps", but not to exceed the certified right of the respective water rights.

Applications to Change No.s <u>59521</u> through <u>59529</u> propose to move the point of diversion and place of use of water allocated under Application to Change No. 55902 (Permit No. 26193; Certificate No. 8939). The total combined duty of Applications to Change No.s 59521 through 59529 is 724 acre feet annually.

Applications to Change No.s 59521 through 59529 are part of a larger group of applications, Applications to Change No.s 59499 through 59542 (the "Hunter Creek Applications"). The Hunter Creek Applications have been filed in the Hunter Creek bedrock aquifer target area in order to transfer a total combined duty of 3,301 acre feet annually. Based on the assumption that a municipal production well in this target area will produce 800 gallons per minute or more, a total of four to six production wells in this target area may be required to provide 3,301 acre feet annually.

The Applicant plans to locate these four to six production well sites by filing applications for waivers in accordance with NRS § 534.050(2). After the four to six production well sites are located in the target area, the Applicant intends to file new Change Applications to change the point of diversion and place of use of water from Application to Change No. 55902 (Permit No.

REMARKS CONTINUED:

26193; Certificate No. 8939) to one of the newly located production well sites (the "New Applications").

Water transferred under these New Applications will be replaced by water transferred under Change Application No. 59581 (the "Replacement Application"). Water transferred under the Replacement Application will be based on Permit No. 17838 (Certificate No. 5365).

The New Applications will be conditioned on the simultaneous approval of the corresponding Replacement Application. To the extent that some but not all of the New Applications are approved and/or denied, it is the Applicant's intent that the amount of water ultimately transferred under the New Applications be approximately equal to the amount of water transferred by the corresponding Replacement Application, and vice versa. The Applicant intends that the ultimate approval of the New Applications and the corresponding Replacement Application be expressly conditioned on their simultaneous approval.
